Problem Statement

"Every great journey starts with a single step." Maya Angelou

Cancers in Bloom syndrome MUST be treated differently

Yet, most oncologists are unaware of existing knowledge, and do not have others they can consult with to come up with the best treatment plan.

Existing information is sparse, and not statistically validated

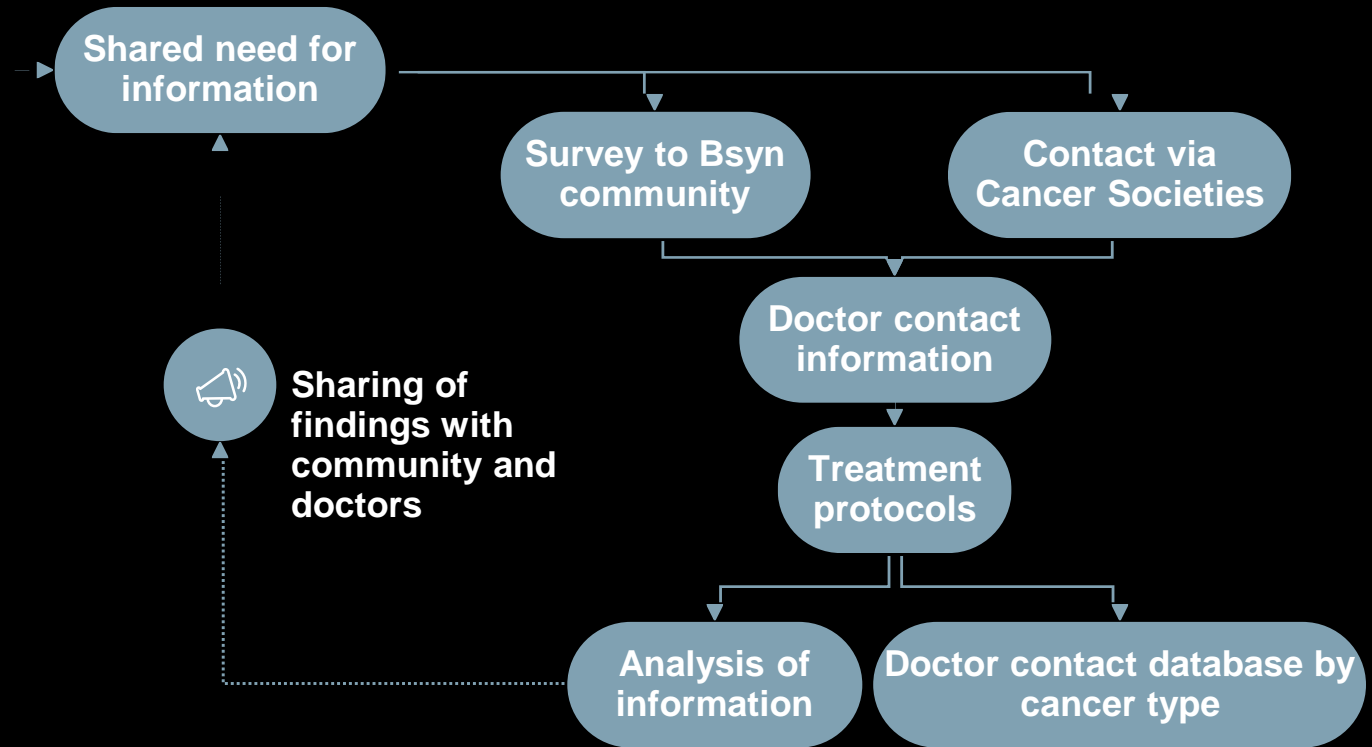

Thus, the Registry can only provide guidance that is limited in utility in individual cases.

There is a gap, that can be filled by understanding patient experiences and information on treating physicians

This is where the BSA is starting.

Our Approach

Goal: More successful treatment protocols for Bloom syndrome cancers

Results so far...

By Numbers

Respondents

6

All from the United States

Unique cancers

7

Including up to 4 cancers in one

Cancer types

6

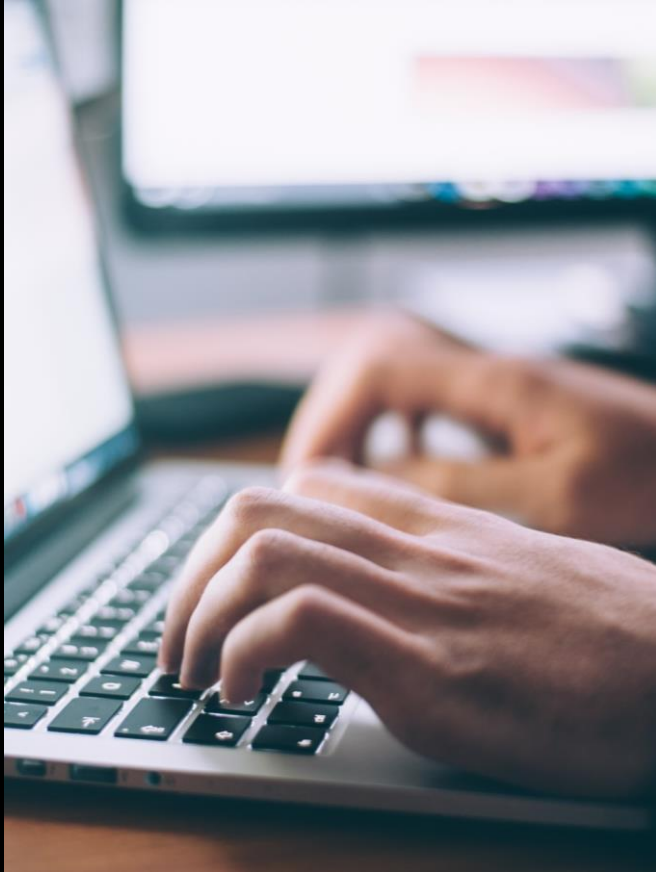

Including Lymphoma, Breast, Colon

Contact Information

5

Active doctors who have treated Bsyn cancers

“I contacted the Registry...wanted to get any guidance as to treatment options. Unfortunately, there were none. ”

“I wish we had known more about Blooms earlier...perhaps earlier detection would have helped ”

“It was scary to have to try to find information on my own. Having a database of doctors would be extremely useful. ”

Let's ensure Jason's legacy lives on...
